

TRAINING CLASSES

Are you hiring a new estimator in the near future?

Is your estimator trained on The EDGE™ software looking to become even more efficient by learning advanced skills?

Do you have an estimator who needs a quick refresher on something already learned?

We are very proud of our U.S.-based training staff. Our trainers have construction and I.T. backgrounds. They have been in your shoes. We are sure that they will be patient, understanding and eager to help you be the most accurate, efficient and consistent estimator possible!

THE ESTIMATING EDGE OFFERS THE FOLLOWING TRAINING CLASSES:

IN HOUSE—Come to our Boynton Beach headquarters for company-specific training. When you schedule training classes at our office, we try to assign no more than three estimators at comparable skill levels. If you have estimators at very different stages of experience, we may assign you more than one trainer.

ON SITE—We can come to your office. However, when you are in your own environment, it is more difficult to avoid interruptions. We try to assign between one and three estimators per trainer in this scenario as well.

INTERNET—If you have an estimator who needs a quick refresher, we can work with you in a one-on-one, web-based training session. No matter the complexity of the topic, we can create a session just for you.

I was very impressed with the training I received here from Dave and the intense training I received at your facility. I still cannot believe how much I learned in such a short time, and how tired I was at the end of the day.

Upstate New York contractor

We were very pleased with the training Jason gave us. He was professional yet friendly enough to achieve a good comfort level. His knowledge of the systems is obviously very high and he was able to transfer some of that knowledge to us. I am sure we will have many questions in the future but we feel good about what we were able to accomplish during these two days.

Virginia contractor

Only The EDGE provides a complete estimating solution—Takeoff and Cost Estimating in just one software application

The EDGE™ software is a construction Takeoff & Cost Estimating solution that enables estimators to automate the process for greater accuracy, increased efficiency and consistent estimates across your company with anytime, anywhere access.

Increase job profitability and use it to measure and price the job, review the bid and manage the job by sharing the takeoff details and the estimate with key personnel.

Get **The EDGE** over your competition.
